Auricular Reconstruction

in cooperation with:
Department of Otolaryngology,
Oberhavel-Hospital GmbH, Hennigsdorf, Germany

Dear colleagues,

The construction of an auricle from autologous tissue is highly complex and demanding for the reconstructive surgeon. Depending on the characteristics of the underlying malformation or deformity, there are various surgical techniques available, which in specialized hands, promise regularly achievable attractive and stable results.

We have specialized in reconstructive and aesthetic auricular surgery for many years and have reconstructed about two thousand malformed, amputated or otherwise deformed auricles up to now.

Just at a different place we will continue our traditional courses and would like to present an overview on our clinical experience, let you observe our surgery and help you individually during our special carving and sculpturing workshop at this international course on auricular surgery. Beside our concepts and techniques in major auricular surgery we will also present a practical guide in the management of minor abnormalities.

We hope you will enjoy the course, go home with new experiences and be able to use them in your daily work for your patients benefit right away.

With kind regards,

Dr. Ralph Magritz

Department of Oto-Rhino-Laryngology,
Head and Neck Surgery
Oberhavel-Hospital GmbH
