Presto

Identity Preserving Facelift Technique, Preserving of the Retaining Ligaments & the SMAS Thethering

in cooperation with
Clinic Dr. Funk, Munich, Germany

Welcome

Dear colleagues,

Producing youthful facial appearence by face lifting often comes along with an undersired loss of a patients individuel phenotype characteristics. This may result from insufficient preservation of retaining ligaments, the „dynamic guardians of facial identity“ and from complete severance of the intersegmental connections of the superficial musculo-aponeurotic system (SMAS) which tether, structure and compartmentalize facial soft tissue into defined, cosmetically relevant anatomical zones.

How to do deep plane rhytidectomy easy, save, fast and protecting the personal identity?

Keywords:

- Identity
- Rhytidectomy
- SMAS technique
- Retaining ligaments
- Facelift
- Aesthetic surgery

With kind regards,

Prof. Dr. Dr. Wolfgang Funk

Clinic Dr. Funk, Munich, Germany
